Project Delivery 1

Features' Description

<u>STUDENT SIDE:</u>

List of Features Implemented (Frontend)

Student Dashboard

- Top navigation bar with links to My Courses and Analytics pages, plus a logout button in the sidebar
- Upcoming Deadlines card showing the next approaching assessment per course
- Recent Activity card showing newly graded assessments across all courses
- Interactive calendar with Today, Week, and Month view toggle buttons
- Monthly and yearly dropdowns for navigating the calendar
- Assignment blocks displayed directly on calendar day cards, clickable to open a modal popup
- Modal popup allowing students to mark an assignment as done, visually updating the assignment block color

My Courses Page

- Course cards displayed in a responsive grid, each linking to that course's detailed assessment page
- Search bar to filter courses by name in real time
- Sort/view toggle dropdown switching between Card View and Course Name Only (list view)
- Hide button per card to move a course to the hidden courses panel without deleting it
- Remove button per card to permanently remove a course from the list
- Hidden Courses panel with an Unhide button to restore previously hidden courses
- All card and hide operations managed dynamically with JavaScript (no page reload)
- Today view showing the current day's card with any assignments due on that date

My Account Page

- Display of student's information (name, email, phone number, emergency contact, current semester's enrollment course list
- Ability to navigate back to the dashboard

Course Detail Pages (COMP 249, SOEN 287, SOEN 228, ENGR 233)

- Course header showing course code, full name, instructor name, and term
- Assessment table with editable inline fields for assessment name, type (Lab/Exam/Assignment/Project/Quiz), due date, earned marks, total marks, and completion status (Pending/Completed)
- Edit and Delete action buttons per assessment row
- Empty last row pre-filled as a blank entry form for adding a new assessment

- Consistent styling using a shared student stylesheet across all four course detail pages

Student Analytics Pages (Summary + Per-Course)

- Summary page showing all enrolled courses as clickable cards, each displaying a ring chart with the current average percentage and assessment completion count
- Sidebar navigation linking to All Courses summary and each individual course analytics page, with the active page highlighted
- Per-course analytics pages for COMP 249, SOEN 287, SOEN 228, and ENGR 233, each showing a current average ring chart, an assessment completion ring with completed vs. remaining count, and a Performance Trend section with horizontal progress bars per completed assessment

Student Authentication Pages

- Student login page with email and password fields and its full stylesheet
- Forgot password page allowing students to submit their email for a reset link
- Reset password page with new password and confirmation fields

Student Settings Page

- Personal account profile section with editable fields for name, email, and account preferences
- Full stylesheet consistent with the student-side design theme

General / UI — Student Side

- Consistent light purple gradient theme (distinct from the admin dark theme) applied across all student pages
- Shared student stylesheet used across all course detail pages for visual consistency
- Card design with subtle borders and hover effects throughout
- Responsive layout using flexbox and CSS grid

List of Features To Be Implemented (Backend)

Authentication & Security

- Real login authentication for both students and admins with hashed passwords
- Session management and role-based access control (student vs. admin views)
- Functional forgot password flow that sends an actual reset email
- Form validation on all login and password reset pages with visible error messages

Database & Backend (Node.js)

- Node.js server replacing all hard-coded data with a real persistent database
- All course, assessment, enrollment, and grade data stored and retrieved from the database
- Server-side calculation of course averages, completion rates, and grade summaries
- Input validation enforced on the server side for all forms

Student-Facing Features

- Student registration and personal account management
- Course enrollment: browse and add courses by course code, name, and term
- Assessment tracker: add and edit assessments per course with earned and total marks saved to the database
- Automatic current average calculation performed server-side and displayed per course
- Unified upcoming assessments dashboard pulling real deadline data from the database
- Analytics rings and performance trend charts driven by real grade data
- Calendar assignments linked to real assessment due dates stored in the database
- Perfect the calendar layout for better assignment display
- Real-time updates of progress indicators when assessments are added or modified
- Grade distribution and performance comparison metrics added to the analytics pages

Bonus Features (if time permits)

- GPA estimation across all enrolled courses
- Export grades to PDF or CSV with real data
- Deadline reminder emails sent automatically before due dates
- Dark/light mode toggle that persists across sessions

<u>ADMIN SIDE:</u>

List of Features Implemented (Frontend)

Admin Dashboard

- Top navigation bar with links to all pages, active page highlight, light mode toggle, and logout button
- Welcome card displaying the admin's name with quick stats (active courses, total students, disabled courses)
- Recent Visited Pages section with thumbnail cards linking to Courses, Analytics, and Course Template pages
- Upcoming Assignments section with visual progress bars showing submission rates per assessment (COMP 249 Assignment 1, SOEN 228 Lab Report 1, SOEN 287 Project Delivery 1)
- Recent Activity feed showing timestamped events (student enrollments, assessment additions, submissions, course disabling)

Analytics Page

- Summary bars showing total active courses, total students, total assessments, and average completion rate
- Course filter tabs (All Courses, SOEN 287, COMP 249, ENGR 233)
- Deadline warning strip highlighting assessments due within the next 48 hours

- Per-course assessment progress bars with completion percentages, student counts, and status badges (On Track / In Progress / Low Completion)
- Export buttons for CSV and PDF (UI only)

Settings Page

- Account Profile section displaying admin name, email, program/department, current term, and office hours with editable fields
- Save Profile and Change Password action buttons
- Courses Taught panel showing the number of courses, students, and assessments, with a dropdown to select the active course and set the academic role
- Admin Controls panel with toggleable switches for: Student Self-Registration, Course Enrollment Open, Grades Visible to Students, Anonymized Usage Statistics, and Email Deadline Reminders
- Apply Changes button to confirm admin control settings

Authentication Pages

- Admin login page with email and password fields and its full stylesheet
- Forgot password page allowing admins to submit their email for a reset link
- Reset password page with new password and confirmation fields

Courses Page

- Table-based course management view listing active courses with editable fields (course code, name, description, instructor)
- Enable/disable toggle switches per course using pure CSS checkbox trick
- Add Course button triggering a popup modal form for creating a new course
- Edit button per row for modifying course details

Course Template Page

- Reusable course structure builder allowing admins to define assessment categories and their weightings
- Assessment and examination tables with editable rows and Add buttons

General / UI

- Consistent dark-themed design across all pages
- Sticky top navigation bar present on all pages
- Active page highlighted in the navigation bar on each respective page
- Fully linked navigation flow connecting all pages
- Responsive layout using flexbox and CSS grid throughout

List of Features To Be Implemented (Backend)

Authentication & Security

- Real login authentication for both students and admins with hashed passwords
- Session management and role-based access control (student vs. admin views)
- Functional forgot password flow that sends an actual reset email
- Form validation on login and password reset pages with visible error messages

Database & Backend (Node.js)

- Node.js server replacing all hard-coded data with a real persistent database
- All course, assessment, enrollment, and grade data stored and retrieved from the database
- Input validation enforced on the server side for all forms

Admin-Facing Features

- Functional Settings page: save profile changes, update account info, and change password against the database
- Course creation, editing, and deletion connected to the database
- Define and save assessment categories and their weightings per course
- Functional course enable/disable toggle stored in the database
- Anonymized usage statistics (assessment completion rates, enrollment numbers) derived from real data

Bonus Features (if time permits)

- Export analytics to PDF or CSV with real data
- Deadline reminder emails sent automatically before due dates
- Dark/light mode toggle that persists across sessions
